**INDUSTRIAL
COMMERCIAL
EQUIPMENT
MANUFACTURING LTD.**

ICE has been a manufacturer serving Canada and the U.S. since 1962. Since our inception, ICE has strived to be a leader in the industry by following these main principles.

- 1) Commitment to success- The success of our customers and employees. To us, success is driven by loyalty that comes from service, quality and innovation. This attitude goes into all our projects, from the initial design stages, to the manufactured product, through to the commissioning phases and on going service to the customers.
- 2) Product recognition- Distribute a product that has been recognized by the HVAC industry for innovation and excellence. The ICE product has withstood the test of time. The knowledge the company has gained from its years of experience and breadth of building types makes ICE well equipped to handle a variety of today's air management applications. Their forward thinking has carried on through such advanced products as:
 - A) HTDM model which has the highest turn down burner in the industry.
 - B) BMA model possesses the most advanced gas valve technology in the direct fired make-up air unit market place.
 - C) GIDM model product line is equipped with a four pass stainless steel drum and tube heat exchanger, unmatched by anyone else in the industry.
 - D) AH series air handling units incorporating carbon filtration. ICE Western are the nationwide distributors for NUSORB. The NUSORB family of absorbents was developed for the treatment and purification of air and gas. Their knowledge acquired from 25 years of experience in some of the most critical air and gas treatment applications in the world (e.g. radioactive effluent control in nuclear power plants) combined with laboratory and pilot testing facilities gives this product the unique ability to make this the most trusted and reliable product for all industries.

ICE does not stop there; many new products are on the horizon to meet ever-increasing concern over energy costs, consumption and impact on our environment.

One aspect of our product recognition that has not received the attention that it deserves is our air handling units, better known in our industry as the wet side of the business. ICE has been manufacturing all types of air handling units, primarily in the industrial market place for over 40 years.

In recent years, our market share in the commercial division has experienced consistent growth. As a result we have accumulated a large information base of equipment drawings and engineering data. ICE has decided that in order to provide easier access for equipment selection on projects that we would catalogue their equipment. ICE Western has an experienced team of professionals and a modern manufacturing facility. With this combination of assets, the company can provide custom systems with a multitude of air management solutions built to unique specifications. We trust we will be able to serve you today and well into the future.

The Product

ICE WESTERN offers the customer a complete line of custom designed HVAC equipment. The products include:

- Air Handling Units with Cooling
- Air Handling Units with Heating
- Air Handling Units with Heating and Cooling
- Air Handling Units with Packaged DX Cooling
- Air Handling Units with Heating and Packaged DX Cooling
- Air Handling Units with Cooling with Heat Recovery or Humidification
- Air Handling Units with Heating with Heat Recovery or Humidification
- Air Handling Units with Heating, Cooling with Heat Recovery or Humidification
- Air Handling Units with Packaged DX Cooling with Humidification or Heat Recovery
- Air Handling Units with Heating and Packaged DX Cooling with Humidification or Heat Recovery
- Explosion Proof Air Handling Units
- Multizone Units
- Indoor Vertical Make Up Air Furnaces
- Adsorbers
- Air Turnover Units
- Direct & Indirect Fired Make Up Air Units with Packaged Cooling
- Variable Frequency Drives
- Fan Coils
- Copper Steel Coils
- PTAC's
